Yet Another Market Cat

A mobile Proof of Shit experiment on Solana.

Lock CATSHIT. Earn Poop Points from finalized chain time. Independently verify every settlement.

ANDROID / DEVNET / PUBLIC SOURCE

The joke gets you in.
The loop brings you back.

THE DESIGN PROBLEM: make a meme reward loop fun to revisit and easy to check.

01 / COMMIT

Lock CATSHIT

Choose a tier. Turn the room into a physical expression of your on-chain lock.

02 / RETURN

Earn Poop Points

Points accrue from finalized chain time, including while the app is closed.

03 / CHECK

Claim. Verify.

Return for hourly results, claim through your wallet and inspect the public settlement.

FOR MOBILE MEME FANS: playful progression, without keeping the app open.

Prototype engagement loop; no audience or retention metrics claimed.

A mobile product, not a WebView.

WALLET

Mobile Wallet Adapter

Connect, lock and claim with real wallet approvals.

SCENE

Cat Shit Engine

Tier-driven 2.5D motion, collisions and particles.

FEEDBACK

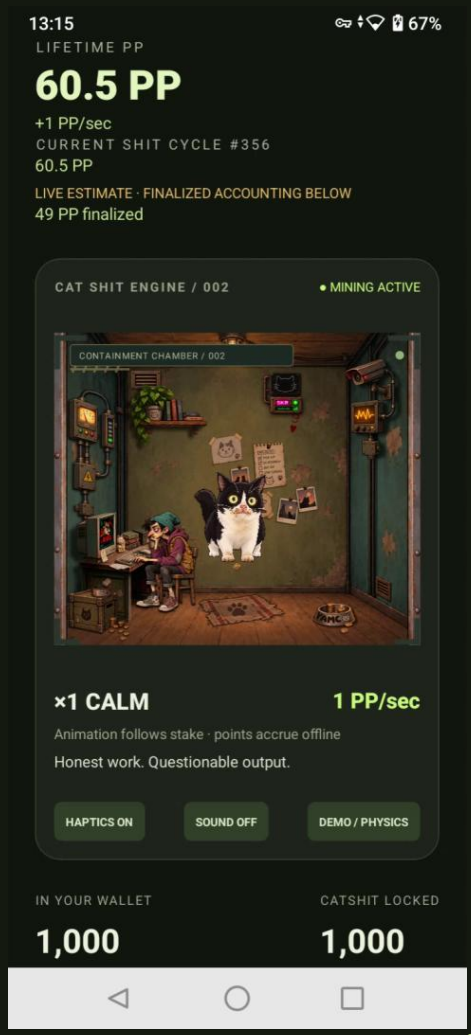

Touch. Sound. BONK.

Haptics, synced mouth poses and native looping audio.

CONTINUITY

Close the app

Reopen into finalized accounting; CPU time is not mining.

Time on chain. Not time on screen.

1 hour
devnet Shit Cycle

100,000
CATSHIT / non-empty cycle

100 million
fixed CATSHIT supply

LOCK

On-chain MiningPosition sets the effective tier

→

ACCRUE

Finalized event intervals determine Poop Points

→

SETTLE

Published Merkle root authorizes reward claims

Rewards are proportional to cycle PP. Empty cycles allocate zero.
Payments come from an existing finite reserve; the publisher cannot mint more.

The database is not the source of truth.

01 Replay

Read finalized Solana history.

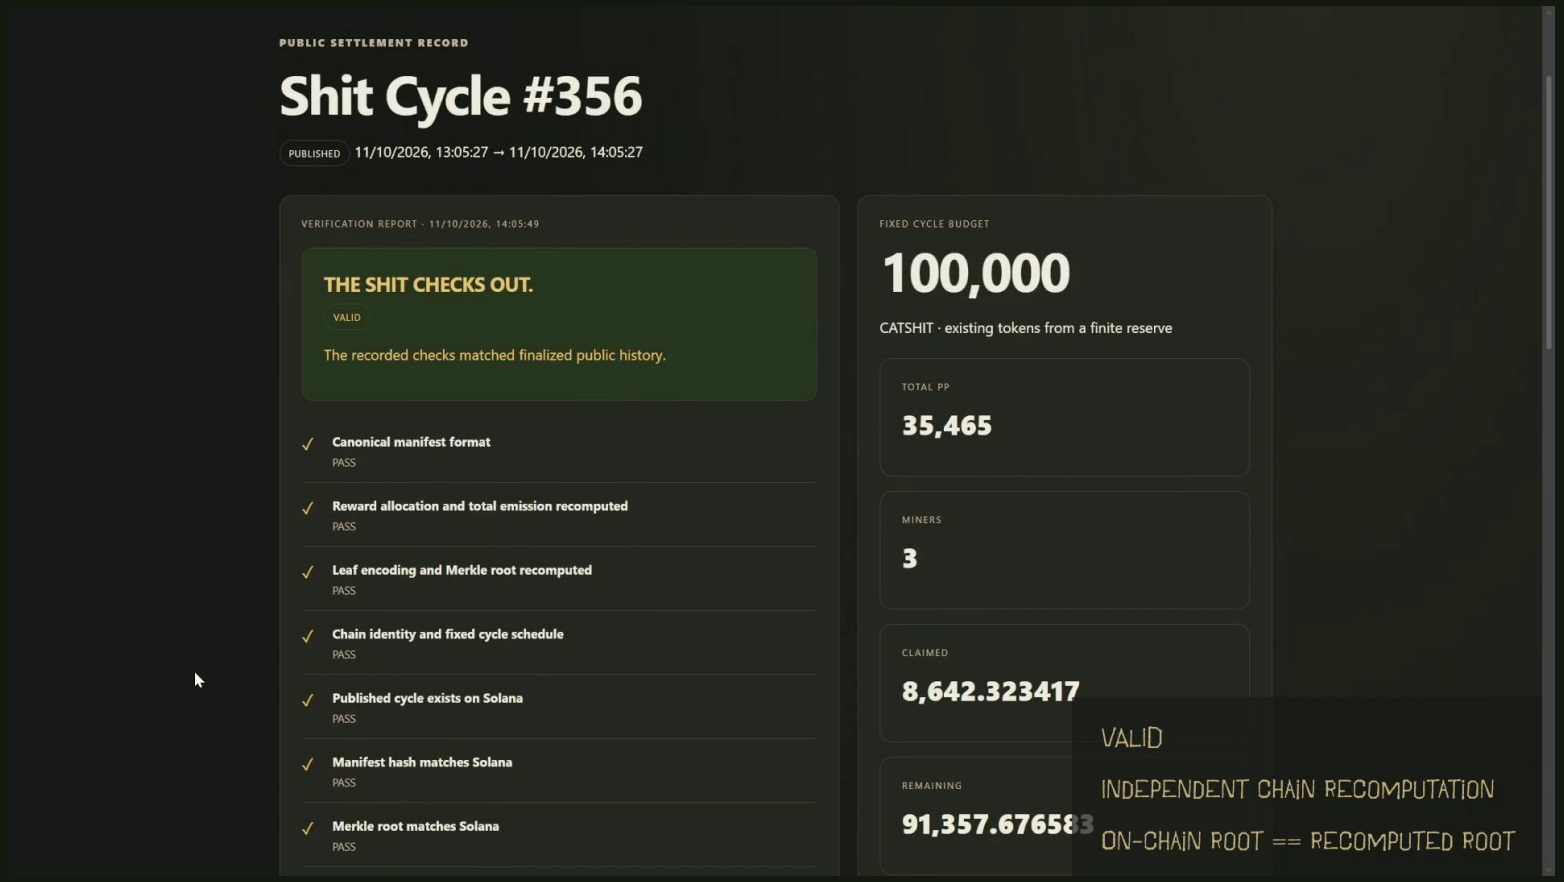

02 Recompute

Derive points, rewards and root.

03 Compare

Match the manifest and on-chain root.

Publicly verifiable, not fully trustless.

Recorded demo: cycle #356 · saved verifier report

Nine taps. Nine lives.

SKR is a community key.

Same wallet. Real mainnet SKR.
Read-only ownership check.

Find the neon cat.
Nine taps within four seconds
unlock a music-filled cat club.

COMMUNITY ACCESS, COSMETIC ONLY

No SKR spending or staking.
No CATSHIT reward advantage.

Clear boundaries. Inspectable settlement.

ON CHAIN

Enforce claims

Owner-bound positions.

Merkle proof validation.

One receipt per claim.

Finite reward vault.

PUBLISHER

Compute + publish

Replays finalized events and posts the cycle root.

Centralized availability and allocation authority.

INDEPENDENT VERIFIER

Check allocation

Replays chain history and recomputes rewards.

Compares the manifest and published root.

A valid claim proof confirms inclusion; independent replay checks the allocation.

Devnet • Upgradeable, unaudited program • No on-chain fraud-proof challenge

Inspect the implementation behind the demo.

CLAIM SAFETY	Immutable cycles, finite reserve and atomic claims tests/program-settlement.test.ts
VERIFIER FAILURE MODES	Missing history stays UNVERIFIABLE; tampering is INVALID tests/product.test.ts
RECOMPUTATION	Independent replay and settlement comparison scripts/cycle-verifier.ts

DEVICE EVIDENCE: recorded lock / claim / verification; accepted audio, haptics and tier transitions.

Source links pinned to a commit. Test coverage and device checks are not an external security audit.

A working mobile loop. A clear next step.

DELIVERED

Play. Claim. Verify.

Android app + Mobile Wallet Adapter

On-chain lock / claim + hourly settlement

Independent replay verifier

Public APK, source and bilingual site

SKR Nine Lives easter egg

BEFORE PRODUCTION

Harden and validate

Independent security review

Wider device coverage

Archival RPC strategy

Mainnet governance decision

Measure repeat engagement

Current release: devnet, centralized publisher, upgradeable program.

The backend calculates the shit. Solana settles it.
